

TITLE OF INVENTION:

**RETRACT - COLLAPSIBLE RACK SYSTEM FOR
BED OF EVERY EXISTING PICK - UP TRUCK**

invented by Rodrigo Corral, Chilean Citizen with
Permanent residence in San Juan, Puerto Rico

SPECIFICATION:

RETRACT- is a collapsible track that lies flat on the pick up bed. It is used by expanding it, with a similar mechanism used in the collapsible legs of an ironing board. When you expand it it will be in level with the roof of the pick-up truck passenger cabin, thus allowing to transport any material or object that will not fit the length space of the bed. This will prevent the object to protrude outside the gate of the bed and cause a hazard.

The collapsible track can be made of light weight aluminum or any other similar light weight and sturdy alloy.

It's installation is to the bed of the pick-up truck and when collapsed it will lay flat so it wont disturb with the cargo area of the truck.
